DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-30 are rejected under 35 U.S.C. 102(b) as being anticipated by Shaughnessy et al. or Ng et al.

Re claims 1-6, 8, 10-16, 18, 20-26, 28, & 30, Shaughnessy et al. (Abstract; column 5, line 66 - column 6, line 59; Figure 3a) and Ng et al. (Abstract; column 5, line 10 - column 6, line 2; Figure 3) each disclose a system for selectively processing selected portions of a document image in which a predetermined color ink (highlighter pen) is applied to annotate user-selected regions of a document with alphanumeric codes. When the document is scanned, these alphanumeric codes are detected, recognized via optical character recognition, and stored. The regions associated with each are automatically determined by the processing software; these document regions are then each processed in accordance with their respective instructions. The resulting processed documents are then printed without the

annotation characters (e.g. the region selected by the user and annotated "X-5" would be shifted five units along the X axis, and printed without "X-5" appearing superimposed thereupon).

Re claims 7, 9, 17, 19, 27, & 29, a first printout used as a test print prior to the generation of a final printout is readable upon a (not further defined) recitation of a "preview image".

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ohja, Karnik, Tanabe et al, Murez, and Tso disclose additional examples of document annotation processing.
